Overview

Decarbonization of the electric power sector is essential for sustainable development. Low-carbon generation technologies, such as solar and wind energy, can replace the CO₂-emitting energy sources (1). The Egypt Climate Agreement and the Glasgow Climate Pact, forged by the United Nations (UN) climate conferences, COP27 and COP26, reaffirm their commitment to limit global temp. 2.1. Conventional CAES descriptionThe first CAES plant was built in 1978 by BBC. Generally, there are two types of CAES coupling systems: One is CAES coupled with other power cycles (e.g., gas turbines, coal power plants, and renewable energy), and the other is. In this section, the characteristics of different CAES technologies are compared and discussed from different perspectives, including the technical maturity level, power/energy ca. CAES is a long-duration and large-scale energy-storage technology that can facilitate renewable energy development by balancing the mismatch between generation and lo.
