Overview

Overcharge protection for lithium-ion batteries is triggered when either of two conditions is satisfied. Firstly, a single cell reaches its rated overcharge voltage. ✂
Quick Answer: What Is a Battery Management System?

A battery management system (BMS) is the electronic brain inside every lithium battery pack. It monitors cell voltage, current, and temperature in real time. It also protects cells from overcharge, over-discharge, short circuit, and thermal. Lithium-ion batteries have revolutionized modern technology, powering everything from smartphones and electric vehicles to large-scale energy storage systems. For instance, lead-acid cells have an overcharge. BMS architecture overview: pack/cell monitors, sensing (V/I/T), protection FETs, and host interface. Safety functions: OV/UV/OC/OT protections, short-circuit response, pre-charge, isolation and contactor control.
