

Build a solar photovoltaic power station

Overview

Before the construction process commences, one needs to identify the place to build the PV solar station and determine the point of connection to the grid. Thus, initially, Solar DAO will plan the project and obtain plan. The second major consideration in the planning of a new solar park concerns the availability, location, and capacity of the grid connection. Usually, the connection point is provided. This stage involves several equally important milestones, including obtaining the land rights, p. The actual construction process is usually outsourced to one or more contractors who do the engineering, procurement, and construction work (EPC). The process involves all the m. In that stage the PV solar plant gets connected to the grid as agreed with the local authorities during the pre-construction negotiations. The monitoring systems also enters the play, b.
