

Energy storage battery company plans to

Overview

Automakers are increasingly investing in energy storage businesses as demand for EV batteries falters. Ford said in December it plans to convert one factory meant for EV batteries to energy storage products, spending \$2 billion on top of the nearly \$6 billion it invested building. GM is expanding efforts to capitalize on the growth of energy storage and data centers, as well as the development of next-generation sodium-ion batteries. The company also announced additional support for its EV owners to help them combat higher energy costs. In 2025, the battery energy storage system (BESS) industry shifted from broad, global exploration to a bifurcated model where major operators like Total Energies aggressively scaled up in stable regulatory environments while pulling back from markets with increasing policy and cost-related risks. The move follows Ford Motor Company's decision to. US car maker joins battery energy storage system (BESS) market with lithium-ion products expected to enter production imminently through LG partnership. What is driving and shaping European BESS project financing and M&A this year?

Minimising counterparty risk is a key component of the German.
