

High-performance lithium battery 200AH R

Overview

As you may have noticed, the total listed capacity of the lead-acid batteries is 300Ah. However, it's advised to only discharge lead-acid batteries to 50%, meaning the usable capacity is only 150Ah. Even if you do. As you can see, it's still a larger initial investment to get the Lithium battery (though they're now not that much more than AGM batteries). But Lithium batteries are incredibly long-lasting and with far superior cyclic durability. The weight saving of a Lithium battery compared to a Lead-acid battery is simply enormous. Even though the Lithium battery delivers fully 30Ah more usable capacity than the Lead-acid battery bank, it weighs fully 60-70kg less. Yes. In 2022, we can say that LiFePO4 batteries are very safe unequivocally. That's due to the advent of LiFePO4, a special type of Lithium that is used by all modern Lithium batteries. As well as, and most importantly, the price. The Eco Worthy 280Ah battery is actually lower cost than some 200Ah batteries and is not lacking in quality. Here's our review of Eco Worthy batteries.
