

How is the capacitor market this year

Overview

The capacitor is a component that has the ability to store energy in the form of an electrical charge, producing a potential difference (Static Voltage) across its plates, similar to a small rechargeable battery. The basic structure of all capacitors is the same. A non-conductive material, called dielectric, separates two. Rising demand for capacitors from the consumer electronics sector is one of the significant factors that is projected to boost the capacitor market in the next few years. Portable consumer. Demand for electric vehicles is increasing consistently due to favorable government regulations and rising incentive policies for the adoption of electric. Asia Pacific held the largest share of approximately 38% of the global market in 2021 due to the presence of major players in the region and growing adoption of capacitors in consumer.
