

# What are the price trends of energy storage projects

## Overview

According to BloombergNEF's Levelized Cost of Electricity 2026 report, the cost of battery storage projects plummeted to new lows in 2025 even as most other clean power technologies became more expensive. BNEF's global benchmark costs for solar, onshore wind and offshore wind costs all rose in. Global average prices for turnkey battery storage systems fell by almost a third year-over-year, with sharp cost declines expected to continue. In 2025, solar panel prices are around \$3/watt, while battery costs range from \$200 to \$400/kWh, reflecting a significant drop over the past. In another record-breaking year for energy storage installations, the sector has firmly cemented its position in the global electricity market and reached new heights. From price swings and relentless technological advancements to shifting policy headwinds and tailwinds, 2025 proved to be anything. All-in BESS projects now cost just \$125/kWh as of October 2025<sup>2</sup>. Capex of \$125/kWh means a levelised cost of storage of \$65/MWh<sup>3</sup>. With a \$65/MWh LCOS, shifting half of daily solar generation overnight adds just \$33/MWh to the cost of solar. This report provides the latest, real-world evidence on.
