

What to do when the battery needs to be replaced

Overview

That sinking feeling you get when you try to start your car and it splutters and groans at you in return is something we've all probably experienced at one time or another. If your car doesn't start with one simple turn. If your windows, lights, heater and other electric systems are slow to respond or experience a complete loss of power then it's probably time to change your battery. This kind of problem. When that pesky battery symbol lights up on your dashboard then it suggests there's a fault in your alternator, battery or electrical system. That means your car won't be charging. Start-stop systems can monitor your battery and detect how much current is being drawn from it. So if the system senses that your battery is struggling, it may disable the start-stop function. Most car batteries are designed to last between five and seven years, so a struggling battery could simply be a sign that yours is approaching the end of its life. You can check th.
